Continuous Improvement – The name of the game in airborne law enforcement. Every dollar spent on air operations, if done correctly will multiply the effectiveness of your operations many times. Let Air Bear show you how to implement the right tactics with cost effective solutions.

Your Airborne Law Enforcement Partner

Air Bear's Mission

Hello, I'm John Nielsen. My partners and I formed Air Bear Tactical Aircraft to address the need to provide cost effective surveillance solutions and to share the lessons learned in my almost three decades of airborne law enforcement operations. **Let us show you how to employ proven mission tactics that get results.**

Air Bear, in *partnership* with our airborne law enforcement customers continually demonstrates how game changing information from above is dependent on a timely response to the scene. Fixed wing aircraft can quickly respond to critical incidents, often arriving on scene minutes before ground support. Employing the right aircraft and proven tactics allows crews to be on patrol and ready to respond. Conversely, aircrews "on call" responding from the airport where they're based all too often arrive far too late to provide effective support.

Reactive airborne response ("fireman response") to critical police calls has proven to be ineffective. As the average pursuit lasts less than 3 minutes, airborne assets need to be on station, ready to respond at a moment's notice. Crime in progress calls are typically dispatched when the suspect is already departing the crime scene and by the time ground based air assets respond, the suspect is well outside the containment perimeter. Airborne response has *proven* to be the most effective tool to provide force multiplication and by employing effective tactics arrest statistics have improved quantitatively.

The most advanced aircraft and mission equipment has little value when it flies only a few hundred hours per year. Our goal is to change that mindset, to engage in proactive air support, on every shift, every day, with an aircraft that won't put your agency in financial handcuffs. Our philosophy is to field the highest level of intelligent surveillance equipment, on easily maintained and *affordable* fixed wing platforms.

Services we provide

- Custom fixed wing surveillance platforms tailored to your tactical requirements
- Consultation services to determine your needs and determine the best solution for you
- Tactical training for Pilot's and TFO's
- Contract Surveillance Services (provided by MAG – an Air Bear team member)
- Municipal Financing
